## APL6 Prestige Platform Lift

### Drawings

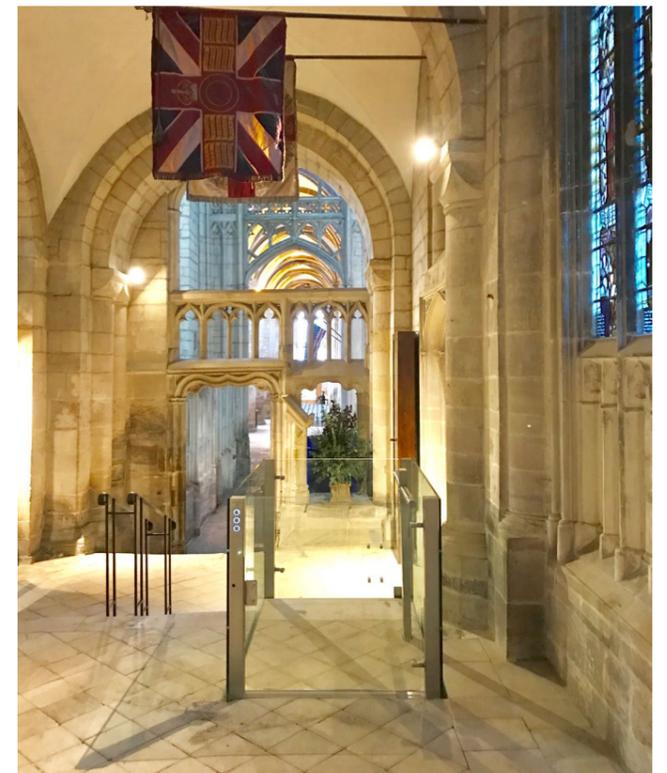

Upper Level Entrances Compliant to:  
-EN 6440  
-Section 9.2 protection of non access sides  
-Guardrails shall be able to withstand the application of a force of 300N, acting at right angles at any point and any directions over an area of 500mm<sup>2</sup> (of round square section) without any permanent deformation.  
Fixed with M8 CSK Anchor Bolts "FH II 12/15 A4".

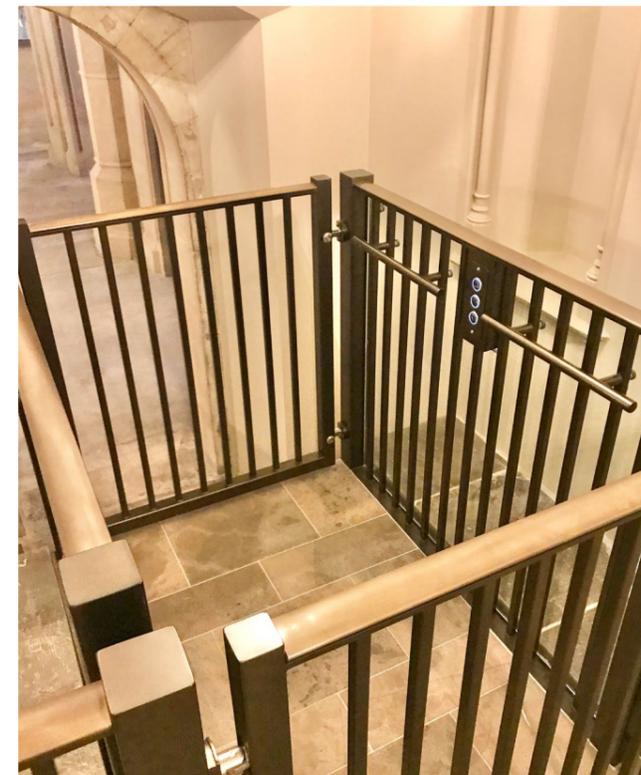

Lower Level Control Post orientation & position to suit site and customer requirements, no more than 3 metres from lift to comply with EN6440, it requires cable routing for lift control, fixed to ground with M8 Anchor Bolts.

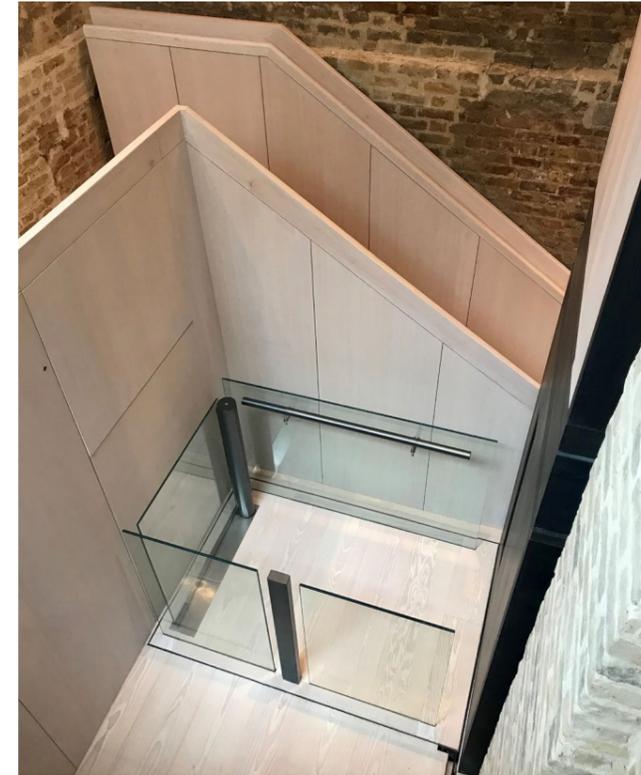

A beautiful example of a lift that remains honest to the original architecture within a wonderful historic landmark under strict planning guidelines.

Exquisite hand crafted oak. Stunning workmanship to complement beautiful architecture. Why mask a platform lift when it can be hidden in plain sight? A wonderful example of creative thinking by our brilliant team.

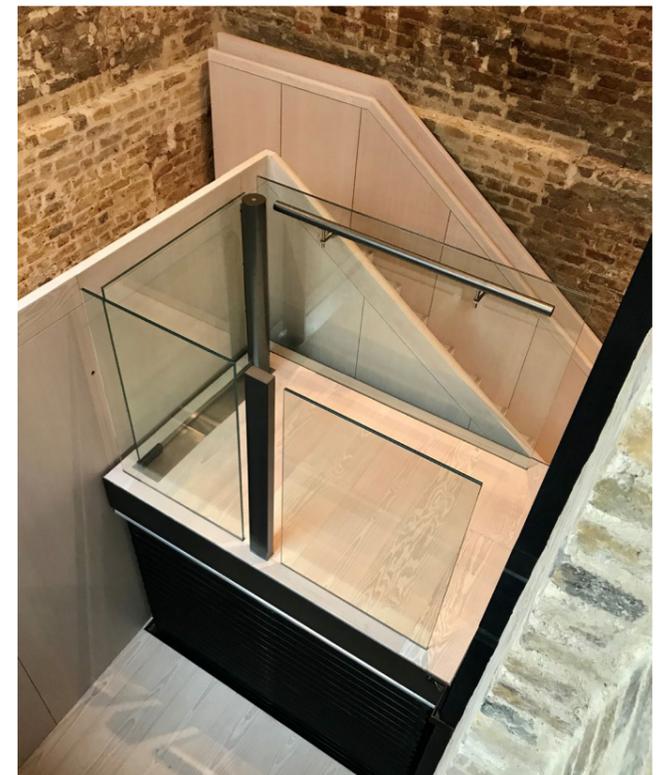

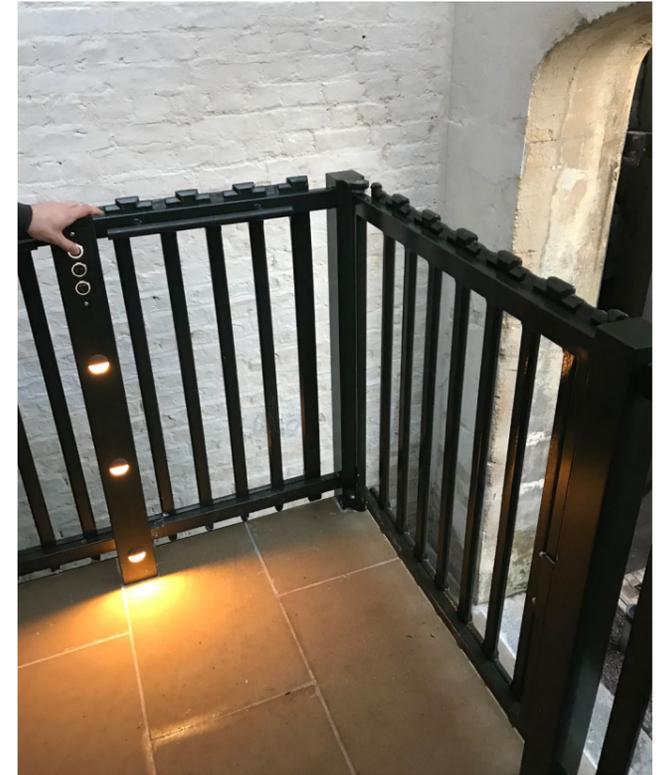

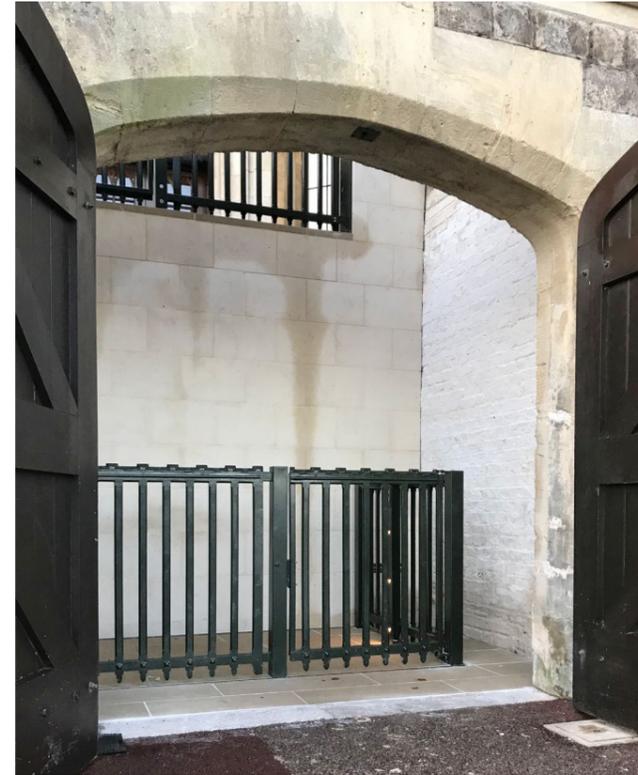

This pair of bespoke heritage lifts have been designed to complement the interior of this heritage landmark perfectly with the clever use of bronze metallic PPC finishes, complete with real bronze capping. The balustrade matches the design used elsewhere within the property and the stone flooring follows seamlessly into the platform.

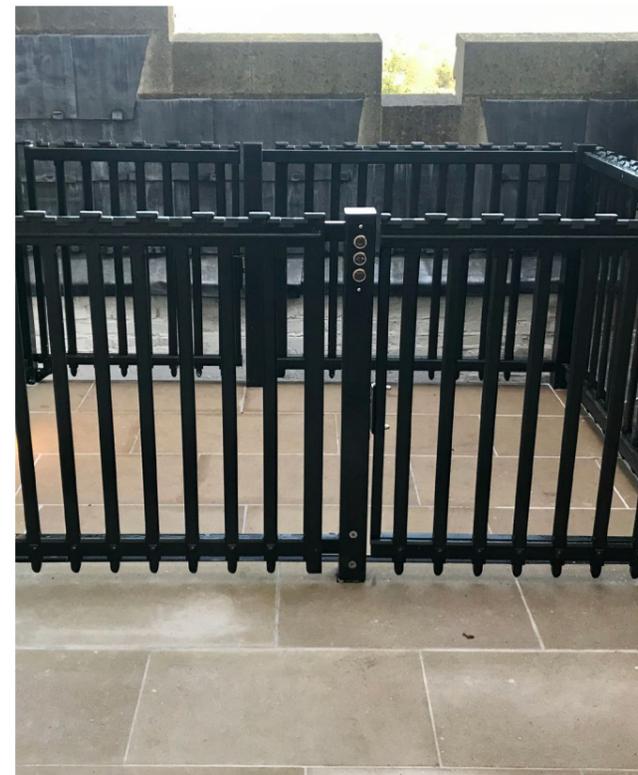

This lift features frameless glass with metallic bronze steelwork and matching timber flooring. The outer gates have been clad with timber veneers to complement adjacent materials.

This APL6 model travels within a frameless glass enclosure with a low profile scissor mechanism, designed to be floor mounted with a fixed ramp for a quick and easy installation with very little builders works required.

Situated in one of London's most exclusive addresses, this APL6 Prestige features a custom metallic champagne finish to complement the exterior of the property.

This prestigious bespoke platform lift uses forged balustrades cast from a 16th century gate found within the castle grounds. Castellations along the top edge and spearheads along the bottom, York stone sets and custom downlighters are included in this truly unique tailor-made example.

Designed for attended operation, our Hidden model bridges height differences of up to 500mm. It is super discreet and can be clad in your choice of materials. It features roll off protection to prevent accidental roll back for wheelchair users.

This lift was designed to complement the remodelled interior of this central London office building. We have used a textured matt black PPC and frameless glass to match the surrounding hardware.

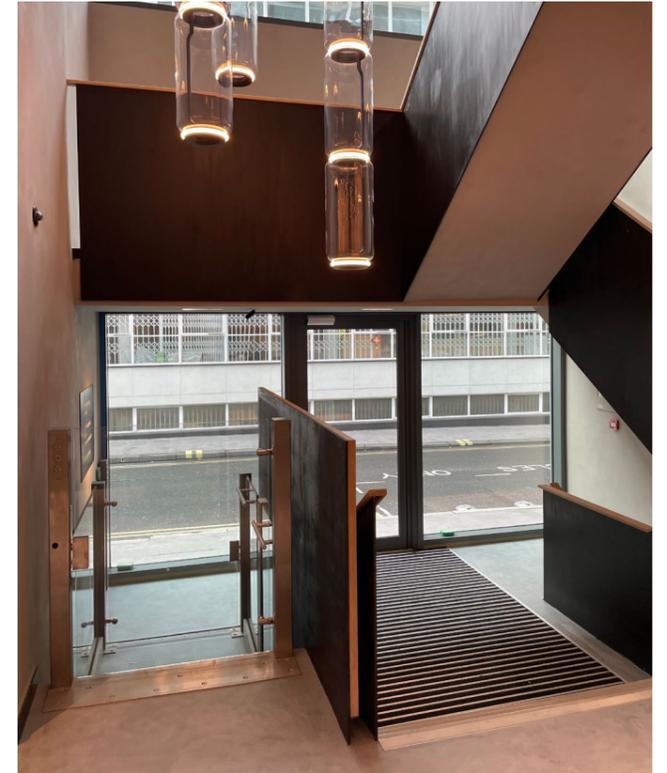

The juxtaposition  
between old and new  
works wonderfully in  
this fully restored priory.  
This low profile lift has  
adjacent entry/exit.

A hidden lightwell  
lift installed at a  
Estonian Embassy.  
We have adapted  
the street level  
balustrade to form a  
discreet interlocked  
gate. The platform is  
laid with matching  
stone slabs.

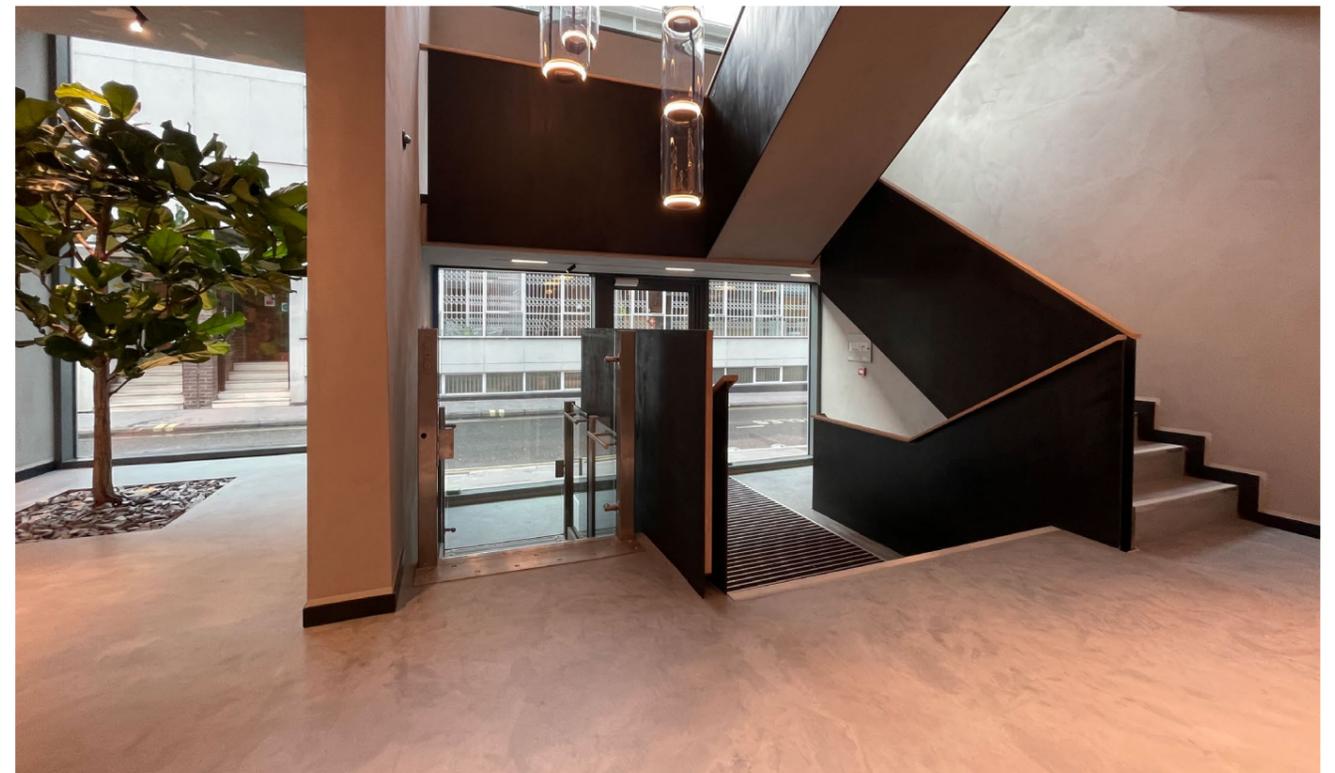

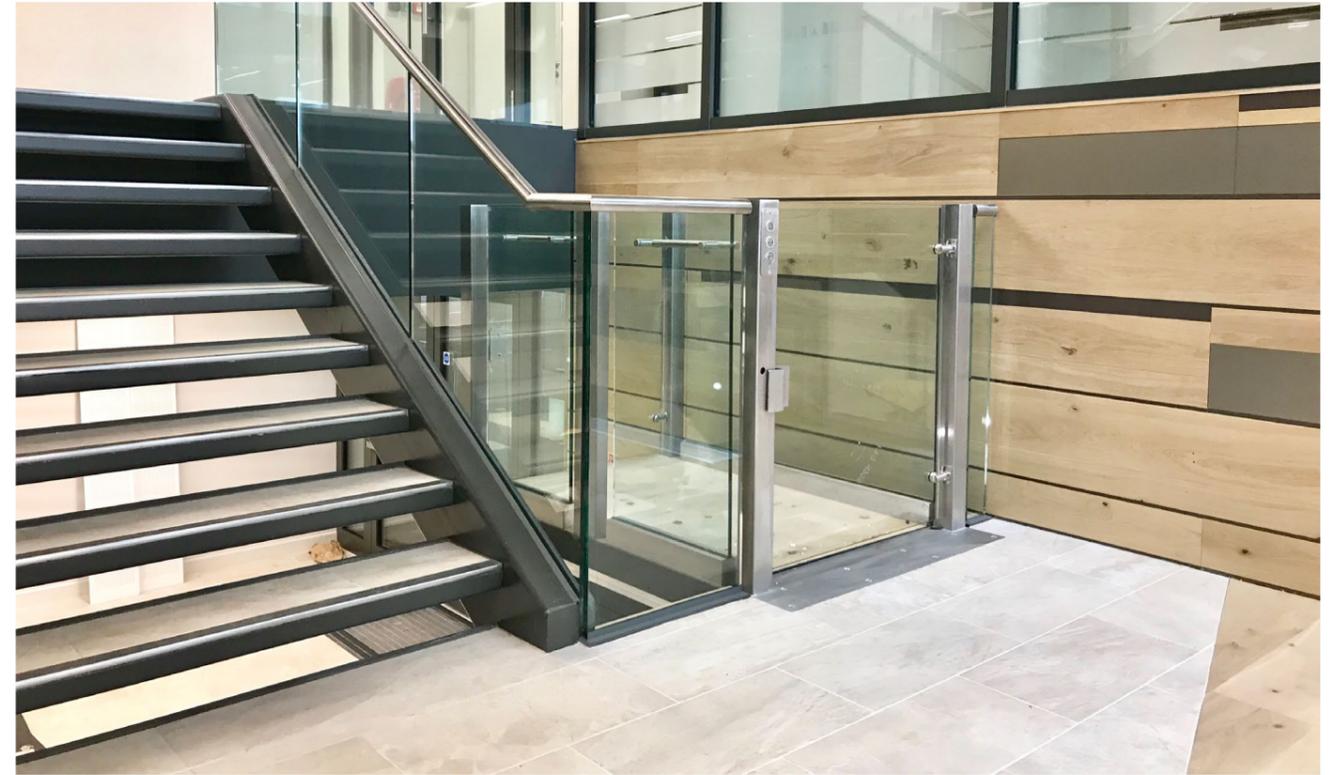

Installed in a modern property in central London, this lift's minimal design and glazing perfectly complement the contemporary design of the entrance foyer.

This APL6 Prestige takes pride of place within the Media Café of London's newest super stadium which is home to Tottenham Hotspur's FC. The lift has tiled flooring to match adjacent surfaces and a chain mail protective skirt to mask the scissor mechanism.

This lightwell basement lift transports patients from street level up to entrance level and also down to the basement. We have adapted the original street level balustrade to form an unobtrusive interlocked gate.

All APL6 platform lifts are designed for constant operation. No matter how busy the traffic flow, your lift can handle it!
